

EDUCATION

Examination	Program	University	Institute	Year	CPI / %
Graduation	B.Tech.	JUT	BIT SINDRI	2027	7.8

SCHOLASTIC ACHIEVEMENTS

- Ranked in top **5.3%** in JEE Main among **1.1 million** candidates; qualified for **BIT SINDRI**.
- Solved **300+** DSA problems across Easy, Medium, Hard levels on LeetCode.
- Smart India Hackathon (SIH); qualified at the college level.

KEY PROJECTS

Lung Cancer Risk Prediction Using Machine Learning — Self Project

- Analyzed a Kaggle medical dataset to classify lung cancer risk levels using **supervised learning**.
- Performed EDA various plots and applied **PCA** with **VIF-based** multicollinearity control.
- Trained and compared **multinomial vs ordinal** logistic regression models for risk classification.
- Achieved high accuracy with minimal misclassification, validated via **confusion matrices**, and generated probabilistic predictions using **scikit-learn, statsmodels, and Python**.

Lifestyle & Sleep Health Analysis using Data science-self Project *(Jan'25 – Apr'25)*

- Cleaned the data and performed **EDA** using **summary statistics, correlation heatmaps and scatterplots** to identify variable trends, and used **regression plots** to visualize behavioral patterns.
- Applied statistical methods including **Pearson correlation, Chi-square tests, and hypothesis testing** to quantify relationships and identify significant predictors of insomnia and sleep apnea.
- Built **Logistic and Multivariate Regression models** to evaluate combined variable effects.
- Interpreted p-values and model coefficients to evaluate predictor importance and ensure statistically reliable modelling.

Customer Data Analysis — Self Project

Tools & Skills: Excel, Data Cleaning, EDA, MySQL, Pearson Correlation

- Analyzed 260K+ sales records and categorized customer types using exploratory data analysis.
- Built a control-trial store model using correlation metrics and sales magnitude ranking.
- Uncovered **key demand drivers** across **product lines, brands, and seasonal trends**.
- Designed dashboards **Excel** for interactive visualization and reporting.
- Queried and managed datasets using **MySQL** to optimize data extraction and **preprocessing**.

TCC Identification and Tracking with U-Net and IRBT Data — ISRO Hackthon

- **Learnings:** Deep Learning (U-Net), Image Processing, Python, NumPy, OpenCV, Data Visualization, Dashboarding, Object Tracking
- Learned satellite-based weather analysis using INSAT-3D IRBT data for atmospheric monitoring.
- Gained experience with AI/ML models for real-time cloud tracking and cyclone prediction.
- Learned geospatial analysis, time-based tracking, and automated metric extraction.

TECHNICAL SKILLS

- **Languages:** C++, Python, LaTeX, Java.
- **Software:** Excel, MySQL, Docker, Github, Microsoft clipchamp.
- **PythonLibs:** Numpy, Pandas, Matplotlib, Seaborn, Scikit-learn, Statsmodels
